

ADVANCED PRESS FUNCTION SWITCH - WIRING

BLACK : GROUND

RED : 12V +

RED / YELLOW STRIPE : RELAY TRIGGER 12V + (KEY ON)

YELLOW : SEAT ILLUMINATION. 12V + (KEY ON + HEADLAMPS ON)

The advanced press function switch has a built-in relay to generate key on power output.

If you are using your own switched 12v output via a AUX , Relay or PDM you can simply tie in the RED and the RED / YELLOW wires together and feed them with the 10 AMP 12V KEY ON power.

The yellow wire controls the backlighting on the amber seat icon. This is designed to be wired so the icon illuminates when the vehicle headlights or interior lights are enabled (night lighting).

If you do not want the night lighting feature you can simply tie it into the switched 12V power feed and have it illuminate whenever the vehicle is KEY-ON.
